IN TYRES

# NITROGEN FOR COMMERCIAL TYRES

Nitralife Nitrogen systems for commercial transport tyre inflation are on-site nitrogen gas generators custom built to customer specifications, providing fast, reliable inflation of single or multiple tyres for any size trucking fleet.

Nitralife Nitrogen Generators make nitrogen gas on-site, on demand, via your air compressor. No refilling needed.

## FEATURES AND BENEFITS

Nitralife Nitrogen Generators are *portable* and can be mounted onto a trailer or service vehicle.

Our Nitrogen Generators are 100% pneumatic. *No electricity needed.*

### *Extended tyre life.*

*Tyres running at the correct temperature and correct pressure will not only be safer but will last longer.*

*Less Tyre failures and improved retreadability.* Unoxidised rubber casings remain flexible and are less susceptible to impact fractures and tyre failures. Nitrogen casings can also be retreaded more times.

### *Tyres maintain pressure better.*

Nitrogen is the slowest migrating gas through a tyre. Tyres running at the correct pressure flex less, run cooler and last longer.

*No oxidation of the inner liner.* Nitrogen tyre casings remain stronger and more flexible. Nitrogen tyres will hold pressure better throughout the life of the tyre.

## SPECIFICATIONS

Model  
NP300-T / NP600-T

N<sub>2</sub> Production  
280 l/min / 560 l/min

Dimensions (mm)  
750 x 550 x 250

Mass (kg)  
41 / 48
