IN TYRES

# NITROGEN IN TYRES

By offering your customers *FREE* nitrogen top-ups for their tyres: You are providing the best possible inflation gas for their tyres – the gas that Formula 1 racing cars, Nascar, commercial aircraft and even the Tour de France use.

## FEATURES AND BENEFITS

Attract new customers to your filling station by offering a professional nitrogen top-up service, where the customer can check and maintain their tyre pressure correctly.

Our Nitrogen Generators are 100% pneumatic. *No electricity needed.*

*Nitrogen extends tyre life. Tyres at the correct temperature and the correct pressure will give you maximum tyre life.*

You are benefiting your bottom-line. Filling station owners who offer a nitrogen service have testified that they have noticed increased fuel sales as a result of offering a *FREE* nitrogen top-up.

Encourage repeat business. Give customers a service centre where they can check their pressures with nitrogen any time of the day.

### The FC03 - Nitrogen Generator:

Makes the nitrogen, by filtering the air from your air compressor - *No refilling needed.*

Is designed to clamp onto the forecourt pillar or hose reel pole - *easy installation with no hot work required.*

Is a modular design. Even the smallest forecourt can have one. For larger sites we recommend 2 or 3 units.

## SPECIFICATIONS

Model  
FC03

N2 Production  
40 litres/minute

Air consumption  
110 litres/minute @ 8bar

Dimensions (mm)  
450 x 365 x 450

Mass (kg)  
20

### Forecourt quantity recommendation

Forecourt (Small) – 1

Forecourt (Standard) – 2

Forecourt (Large)/Freeway site – 2 / 3 / 4
